SUMMARY

Aspiring Full Stack Developer with hands-on experience in building scalable, user-centric web applications and microservices. Skilled in Python, with a strong background in REST API integration, database optimization, and modern software development practices. Passionate about delivering robust technical solutions for enterprise and cloud platforms.

TECHNICAL SKILLS

Target Role Matching Skills: Python
Programming Languages: JavaScript, PHP, Python, Java, C
Web Development: HTML5, CSS3, JavaScript, React.js, Responsive Web Design
Backend Development: PHP, REST APIs, Authentication Systems, OTP Login Systems
Databases: MySQL, Neon DB, Database Design, SQL Optimization
Tools & Technologies: Git, GitHub, Git Bash, RabbitMQ, SonarQube, WSL, Linux, Apache Server
Mobile App Development: React Native
Concepts: API Integration, ERP Systems, Dashboard Systems, Role-Based Access Control, Prompt Engineering, Generative AI
Languages: English, Hindi

PROFESSIONAL EXPERIENCE

WeKnow Technologies

(Full Stack Developer) May 2025 -- Present

- Developing and maintaining secure and scalable government web applications using PHP, MySQL, HTML, CSS, and JavaScript.
- Designing and implementing RESTful APIs to enable seamless communication between frontend interfaces and backend services.
- Writing optimized SQL queries and stored procedures to efficiently handle large datasets and improve database performance.
- Implementing backend business logic for government service platforms to support real-time digital workflows.
- Debugging and resolving application issues to improve overall system stability and reliability.
- Collaborating with cross-functional teams including developers, testers, and project managers, to deliver high-quality web solutions.
- Enhancing application performance by optimizing backend processes and reducing response times.
- Implementing validation, authentication mechanisms, and secure coding practices to ensure data integrity and system security.
- Assisting in deployment and maintenance of web applications on production servers using Apache and Linux environments.
- Participating in feature enhancements and system upgrades to improve functionality and user experience of government platforms.

Outlier

(Data Annotator & AI Model Evaluator) Mar 2024 -- Jun 2025

- Worked on prompt engineering to evaluate and improve responses generated by large language models.
- Analyzed AI-generated response for logical consistency, reasoning quality, and factual correctness.
- Evaluated complex prompts across STEM domains including mathematics, science, and logical reasoning.
- Identified model weaknesses and provided structured feedback to improve AI response quality.
- Assisted in the creation and refinement of training datasets used for improving multimodal AI systems.

Oasis Infobyte

(Web Development Intern) Jun 2024 -- Jul 2024

- Developed a GitHub Explorer web application to fetch and display GitHub user profiles using the GitHub API.
- Implemented asynchronous JavaScript using the Fetch API for dynamic data retrieval.
- Designed a responsive UI for seamless usage across devices.
- Implemented input validation and error handling for improved user experience.

Drycode Pvt. Limited

(Web Developer Intern) May 2024 -- Jun 2024

- Developed frontend features for web applications using HTML, CSS, and JavaScript.
- Implemented DOM manipulation and event handling to build dynamic UI components.

EDUCATION

School of Management Sciences, Lucknow Sep 2022 -- Jul 2025

Bachelor of Computer Applications (BCA)

PROJECTS

UPSfMS – Uttar Pradesh State Fertilizer Management System

Developed a comprehensive internal software system for managing fertilizer distribution and monitoring across Uttar Pradesh. The system includes role-based user access, separate dashboards for different users, API-based data fetching from servers, activity logs, and data tracking features. The application is designed to simplify operations related to fertilizer stock, distribution, and reporting at the state level. The system includes dashboard analytics, report generation, stock monitoring, user activity logs, and role-based access for different departments across the state.

<http://upsfms.com>

E-TOKEN Mobile Applications – Farmers and Retailers (React Native)

Developed mobile applications for farmers and retailers for token-based service and queue management system in collaboration with WeKnow Technologies. The applications include OTP-based login authentication, token generation, dashboard views, and server-based data synchronization through APIs. The applications are fully functional and currently in testing phase before production deployment.

ERP Systems – Colleges, Schools and Hotels

Worked on multiple ERP systems for educational institutions including KNIPSS Sultanpur, Raghuveer Mahavidyalaya Jaunpur, and MEA School Rudauli Ayodhya. The ERP systems included modules such as student management, admission management, fee management, receipt generation, reports, dashboard analytics, and OTP-based login authentication for secure user access. Also worked on hotel ERP systems which included table booking, order booking, room booking, billing system, customer management, and administrative dashboards for hotel operations.

Involved in backend development, database design, SQL query optimization, report generation, role-based user access control, activity logs, and dashboard systems for management and administrative users.

Spice Serve – Catering Services Booking Website (Major Project)

Designed and developed a multi-page catering service booking website where users can browse dishes, select catering services, and make booking requests. The backend database was hosted on Neon DB and the website included multiple pages, booking forms, database connectivity, and responsive design. Developed as the major project during the Bachelor of Computer Applications.

<https://spice-serve.onrender.com/>

GitHub Explorer – Minor Project

Developed a web application using GitHub API to fetch and display GitHub user profile information dynamically. Implemented asynchronous JavaScript using Fetch API, error handling, input validation, and responsive UI design.

<https://github.com/Silent237/GitHub-explorer>

Oasis Infobyte Internship Projects

Developed multiple frontend projects including To-Do List Web Application, Calculator, and Tribute Page using HTML, CSS, and JavaScript during internship period. All projects were mobile responsive and focused on DOM manipulation, event handling, and UI design.

Dynamic Websites and Web Applications

Designed and developed multiple dynamic websites and web applications with database connectivity, admin panels, dashboards, and responsive layouts for educational institutions, businesses, and service platforms. Key websites developed are listed below:

- Topsy Town – tipsytown.in
- Shane Avadh – shaneavadh.in
- Bedis Dreamland – bedisdreamland.com
- GBP College – gbpcollege.ac.in
- AND KPG College – andkpgcollege.com
